DECLARATION

I, Krishna Mahato, student of Amity Institute of Education, hereby declare that the report titled "Diagnostic Test and Remedial Teaching Report", submitted by me to Amity Institute of Education, Amity University Uttar Pradesh, in partial fulfilment of the requirements for the award of the degree of Bachelor of Education (B.Ed.), is based on the school internship work I carried out. This report has not previously formed the basis for the award of any degree, diploma or other similar title or recognition.

I have acknowledged the sources used in preparing the report and protected the identities of the school and students. The school is referred to as XYZ, and student names are not disclosed.

Place: Noida

Date: _____

Name: Krishna Mahato

Enrolment Number: [withheld]

ACKNOWLEDGEMENT

I express my sincere thanks to the faculty members of Amity Institute of Education, Amity University Uttar Pradesh, for the guidance and support that helped me complete my school internship and prepare this report.

I am grateful to the principal and teachers of School XYZ for the opportunity to work with Class IX A. I thank the students for participating in the three diagnostic assessments and the remedial practice. Their responses helped me identify difficulties in Social Science and reflect on the changes I needed to make in my teaching.

I also thank my fellow interns and batchmates for their cooperation during the internship. Preparing this report helped me bring together my assessment results, teaching decisions and reflections on the progress and continuing needs of the class.

Krishna Mahato

Diagnostic Test and Remedial Teaching Report

B.Ed. School Internship File

Class IX A Social Science

Preliminary details

Particular	Details
Name of school and venue	School XYZ, classroom of Class IX A
Class and strength	Class IX A, 40 students
Subject	Social Science
First assessment	21 August 2026, Friday
Second assessment	29 August 2026, Saturday
Third assessment	11 September 2026, Friday
Permitted time and maximum marks	Three hours and 80 marks for each paper
Remedial teaching	Two phases between the three assessments
Confidentiality	Student codes A to Z and AA to AN; no student names

1 Purpose and background

I carried out this diagnostic and remedial teaching programme to identify the difficulties affecting Social Science performance in Class IX A and to use those findings in my teaching. I conducted a baseline assessment, provided focused practice, reviewed progress through a second assessment, changed the emphasis of the remedial work and conducted a third assessment. The three question papers are appended after this report.

When I compared the three assessments, I found improvement in overall performance, although the improvement was not uniform. The class mean rose from 43.10 to 48.00 out of 80. Thirty-one students obtained a higher mark in the third test than in the first, two obtained the same mark and seven obtained a lower mark. While checking the scripts, I noticed better answer organisation and, after the second remedial phase, better map work. Vocabulary remained a difficulty that I needed to address.

My purpose was to identify learning needs, not to label students. A total score indicates achievement on a particular paper, but it does not explain every error. A student may recall information but struggle to develop an answer, or understand a concept but use an inaccurate term. Diagnostic assessment becomes useful when these differences guide the next teaching decision. In this programme, remediation focused on particular skills rather than repeating every chapter in the same form.

I wanted to identify recurring difficulties, provide suitable practice, review its effect and change my teaching where students needed more support. I also wanted to give them clear priorities for further

preparation. I focused on map work and spatial identification, conceptual reasoning, structured answer writing and subject-specific vocabulary. Vocabulary became a clearer concern when I checked the second assessment, so I gave it greater attention in the next remedial phase.

I organised my work according to Module 4 of the School Internship Handbook 2026. I have explained the assessment design, the procedure I followed, my analysis of errors, the remedial teaching and materials, and my interpretation of the results. My purpose was to identify classroom learning gaps. I did not use these assessments to diagnose a specific learning disability or another clinical condition.

2 Assessment design and diagnostic parameters

Each paper contained 38 numbered questions, with four subject sections carrying 20 marks each. The forms included multiple-choice questions, very short answers, short answers, long answers, case-based questions and map tasks. This design sampled factual knowledge, explanation, application and spatial identification. It also required students to communicate ideas through written responses.

Question form	Number of main questions	Total marks
Multiple choice	20	20
Very short answer	5	10
Short answer	3	9
Long answer	4	20
Case based	4	16
Map tasks	2	5
Total	38	80

Case-based questions contained sub-parts. The map component contributed two History marks and three Geography marks. Internal choice was provided in the long-answer questions. The common structure supported broad comparison, but the papers contained different questions and were not formally equated for difficulty.

Area	First assessment	Second assessment	Third assessment
History	Early societies, political organisation and sources	Civilisations, social organisation and governance	Sources, political development and trade
Geography	Earth processes, atmosphere and monsoon	Weathering, landforms and monsoon	Hazards, climate and mitigation
Political Science	Democratic principles and elections	Participation and electoral arrangements	Accountability, institutions and electoral fairness
Economics	Scarcity, choice, demand and supply	Economic systems and price intervention	Market relationships, supply and equilibrium
History map locations	Pataliputra and Mathura	Ujjayini and Nashik	Rajgriha and Kanchipuram
Plate regions	Pacific, Eurasian and Indo Australian	African, South American and Antarctic	North American, Pacific and African

I used three papers based on National Council of Educational Research and Training Grade 9 Social Science Part 1 material. Their range of questions helped me examine different demands of the subject. These were classroom diagnostic assessments rather than standardised instruments.

I included assertion–reasoning in my practice work because students needed help connecting a statement with its explanation. The three written papers did not have a separately scored set of formal assertion–reason pairs, although they did contain explanatory and application questions. I have therefore discussed the relevant learning need under conceptual reasoning without assigning it a separate test score.

Diagnostic parameter	What I examined	What I needed to teach
Spatial identification	Appropriate location and labelling	Connect names with reference points and practise independently
Conceptual reasoning	A valid connection between a claim and its explanation	State the idea, give a reason and apply it

Diagnostic parameter	What I examined	What I needed to teach
Answer structure	Relevant points organised to meet the question	Read the command, plan and develop the response
Vocabulary	Accurate use of subject terms	Learn meaning in context and use the term in an answer

I used these parameters to focus my review of the scripts. My observations about these skills need to be read alongside the total-score analysis.

3 Procedure and source of the marks

I administered the first test on 21 August, reviewed the scripts and selected priorities for remedial teaching. After the first phase of practice, I conducted the second test on 29 August. Its findings led to a revised emphasis on map work, vocabulary and explicit answer construction. The third test on 11 September provided the post-remedial assessment. I then gave students individual weakness points for revision because only one teaching day remained before the shift to half-yearly preparation. The Social Science examination was scheduled for 30 September.

I prepared the comparison register from my complete handwritten marksheet, using its current corrected entries. I used the same register for all the score calculations in this report.

I calculated the results for forty students, with each paper carrying eighty marks. I used thirty-five marks as a descriptive reference point, equivalent to 43.75 per cent of eighty, rather than as an official pass mark. I kept the performance-band boundaries unchanged across the three tests so that my comparison would not be affected by changes in grouping.

4 Student-wise comparison register

I calculated each change by subtracting the earlier mark from the later mark. A positive value shows an increase, zero shows no change and a negative value shows a decrease. These columns compare total marks; they do not measure change in individual skills.

Student code	Test 1	Test 2	Test 3	Change 1 to 2	Change 2 to 3	Change 1 to 3
A	39	41	45	+2	+4	+6
B	29	22	26	-7	+4	-3
C	34	32	37	-2	+5	+3
D	57	60	67	+3	+7	+10
E	60	62	63	+2	+1	+3
F	55	58	60	+3	+2	+5
G	42	40	44	-2	+4	+2
H	44	45	49	+1	+4	+5

Student code	Test 1	Test 2	Test 3	Change 1 to 2	Change 2 to 3	Change 1 to 3
I	38	45	50	+7	+5	+12
J	45	47	50	+2	+3	+5
K	22	28	33	+6	+5	+11

AM	38	47	50	+9	+3	+12
AN	37	44	50	+7	+6	+13

5 Baseline assessment and initial inference

The first test produced a class total of 1,724 marks and a mean of 43.10. The median was 45, the lowest mark 22 and the highest 72. Ten students, or 25 per cent of the class, scored below 35. Twenty-five scored from 35 to 50, four from 51 to 65 and one from 66 to 80.

My script review identified map work, conceptual reasoning and answer writing as priorities. In map work, students needed support in connecting a place or plate name with an appropriate location and label. The assessment identified a need for more spatial practice; it did not establish that lack of regular practice was the sole cause. In reasoning, the concern was whether an answer connected a claim with an explanation. In written answers, the concern was selecting and organising relevant points to meet the question's demand.

I identified B, C, K, P, R, W, Y, AA, AI and AK as the ten students below thirty-five in the first test. I gave this group priority for closer review, but I did not assume that a low total identified a particular weakness. I also considered the errors in higher-scoring students' scripts, since a satisfactory total could still conceal difficulty with maps or subject vocabulary.

Initial finding	My interpretation	My teaching decision
Weak map responses	Spatial identification required more support	Provide guided location and labelling practice
Weak reasoning	Some explanations did not make the relationship clear	Practise linking a claim with a reason and example
Weak answer organisation	Knowledge was not always expressed as a complete response	Make question analysis and answer planning explicit

I noted the main error patterns while checking the scripts and used them to identify teaching priorities. I kept possible explanations, such as weak recall or uncertainty about a command word, separate from what the answer itself showed.

6 First remedial phase

The first remedial phase addressed map work, answer writing and assertion–reasoning. The teaching decision followed the baseline findings. My aim was to make the steps of a response clearer and give students opportunities to practise them. The work remained connected to the assessed Social Science content instead of becoming a general repetition of the syllabus.

For maps, the teaching sequence was guided location, attention to reference points, independent labelling, correction and repeated short practice. Reference points help a student relate a name to its position rather than remember it as an isolated word. Independent labelling then checks whether the location can be recalled without copying. A corrected map is most useful when the student attempts the

task again; otherwise, the correction may remain the teacher's work rather than the learner's understanding.

For answer writing, I worked with the demand of the question before the finished response. Students needed to identify the command word, consider the marks and required depth, plan relevant points, explain each point and review completeness. The purpose was not to force every answer into the same length or structure. A comparison needs matched differences, while a causal explanation needs a clear relationship between the condition and the outcome.

Reasoning practice focused on moving from a statement to an explanation. I used a sequence of claim, reason and example or application. In assertion–reasoning practice, judging whether two statements are true is different from judging whether one explains the other. This distinction helped define the instructional target.

Focus	How I organised the practice	What I looked for in the next assessment
Map work	Guided location, reference points, independent labels and correction	Greater accuracy with the locations in the new paper
Answer writing	Command word, question demand, point plan and explanation	More relevant and complete responses
Reasoning	Claim, reason and application	Clearer explanation of why an answer fits a situation

I recorded the areas covered in the first remedial phase and used the second assessment to review students' progress after this practice.

7 Progress assessment and revised diagnosis

The second test produced a total of 1,780 marks, a mean of 44.50 and a median of 47. The mean was 1.40 marks higher than in the baseline test. Seven students, or 17.5 per cent, scored below 35. The highest mark was 68 and the lowest 22. The reduction in the lower-scoring group was encouraging, but the highest score fell, and some individual scores also declined.

In the second test, I found that B, C, K, P, R, Y and AI remained below thirty-five. W, AA and AK had reached at least thirty-five. Q had started at thirty-five and then scored thirty-nine. Comparing the individual marks helped me distinguish students who had crossed the reference point from those who had already been at or above it.

My review suggested improved answer writing and conceptual reasoning. Map work did not show a clear improvement. Vocabulary and what I had described in my notes as creativity remained concerns. Here, creativity means the ability to explain a relevant idea in one's own words or choose a suitable example. No formal creativity measure was used, so it is not treated as a measured learner trait.

Finding after the second test	How I changed my teaching
Answer writing improved but remained uneven	Continue explicit planning and increase independent response practice
Reasoning improved	Continue asking for explanations and applications
No clear improvement in map work	Increase repeated map practice and checking
Vocabulary and independent expression remained weak	Practise terms in context and use them within answers

I could see that the first remedial phase had not met all the learning needs sufficiently. If I had looked only at the higher class mean, I might have overlooked the continuing difficulty with maps. I used what I noticed in the scripts to change the emphasis of the second phase.

8 Second remedial phase

In the second remedial phase, I gave more attention to maps, subject terms and explicit teaching of answer construction. I used repeated short map attempts so that students could identify a location, check it against a reference and correct the label. I wanted them to identify locations independently on a new task.

I treated vocabulary as part of understanding and expression. I worked through the term, its contextual meaning, oral use, a written sentence and its use in an answer. I wanted students to do more than recall a definition. For example, opportunity cost needs to be related to a choice and the alternative given up, while accountability needs to be used to explain how a person or institution is answerable for decisions.

For answer writing, I continued to connect the response with the question. Students needed to decide what the command required, select the points, explain them and check whether the answer was complete. I also gave attention to word choice, because a vague expression can weaken an otherwise relevant point. Simple accurate wording was preferable to an elaborate sentence that did not communicate the concept.

Revised focus	Why I changed the emphasis	Intended outcome
More map practice	No clear improvement after the first phase	More accurate spatial identification and labels
Contextual vocabulary	Difficulty using precise terms	Correct subject terms within explanations

Revised focus	Why I changed the emphasis	Intended outcome
Explicit answer construction	Earlier improvement was incomplete	Relevant, developed and organised responses
Continued reasoning practice	The emerging improvement needed further application	A clear link between a claim, reason and situation

I used the assessment questions and practice in maps, reasoning, vocabulary and answer construction to support the remedial work. I have kept the three papers and my summary notes.

9 Post remedial assessment

The third assessment produced a total of 1,920 marks, a mean of 48.00 and a median of 49. The lowest mark was 26 and the highest 74. Four students, B, K, Y and AI, remained below 35. The corresponding proportion was 10 per cent. Of the original ten students below 35, C, P, R, W, AA and AK reached at least 35 by the third test. No student who began at or above 35 ended below that boundary.

My script review suggested improvement in map work after the additional practice. Answer writing was better but still needed further development, and vocabulary problems persisted. These are qualitative conclusions; the records do not support skill-specific percentages or gains.

I did not make a separate final judgement about assertion–reasoning after the third test. I could report the improvement I had noticed after the second assessment, but not a further measured gain. I also could not regard the programme as complete mastery: four students remained below thirty-five, and vocabulary still required attention.

Only one teaching day remained before half-yearly preparation. I therefore gave students individual points about their remaining weaknesses for revision before the Social Science examination on 30 September. There was no third extended remedial phase. This report concludes the diagnostic sequence and does not claim results from the later examination.

10 My comparison of the three assessments

Indicator	Test 1	Test 2	Test 3
Number of students	40	40	40
Total marks	1724	1780	1920
Mean out of 80	43.10	44.50	48.00
Mean as percentage	53.875%	55.625%	60.000%
Median	45.0	47.0	49.0
Lowest mark	22	22	26

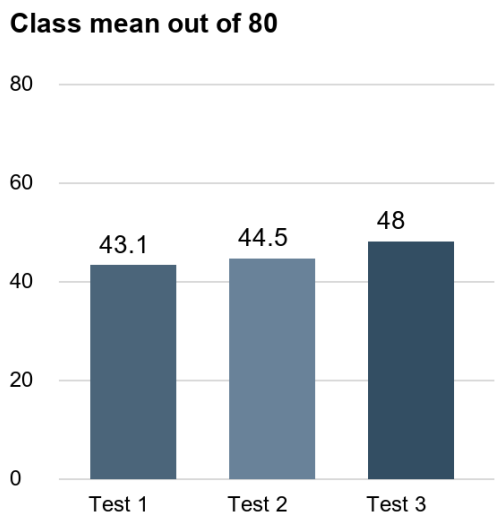

Indicator	Test 1	Test 2	Test 3
Highest mark	72	68	74
Below 35	10 (25%)	7 (17.5%)	4 (10%)

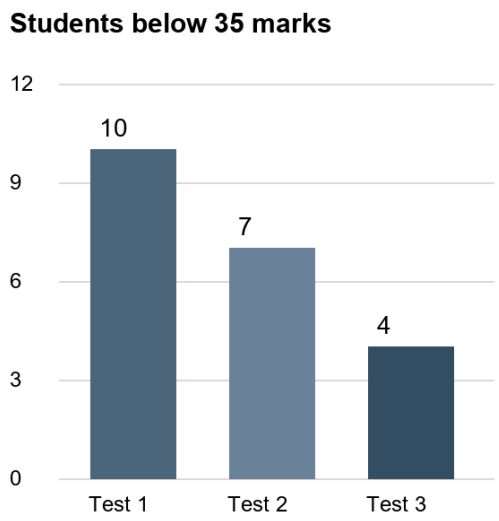

The mean increased by 1.40 marks from the first to the second test and by 3.50 marks from the second to the third. The net increase was 4.90 marks out of 80. The class mean as a percentage of the maximum rose from 53.875 to 60.000 per cent, an increase of 6.125 percentage points. Relative to the initial mean, the increase was approximately 11.37 per cent. These are different measures of the same score change and should not be used interchangeably.

The median rose from 45 to 49, indicating that the improvement was not confined to the highest score. The mean individual gain was 4.90 marks and the median individual gain was 3 marks. The median of individual changes is not necessarily the difference between the two class medians, because the ordering of students can change between tests.

Common score band	Test 1	Test 2	Test 3
Below 35	10 (25%)	7 (17.5%)	4 (10%)
35 to 50	25 (62.5%)	29 (72.5%)	30 (75%)
51 to 65	4 (10%)	3 (7.5%)	3 (7.5%)
66 to 80	1 (2.5%)	1 (2.5%)	3 (7.5%)
Total	40 (100%)	40 (100%)	40 (100%)

The bands are identical across all three assessments: below 35, 35–50, 51–65 and 66–80. The below-35 count decreased by six students, from ten to four. The proportion fell by 15 percentage points, from 25 to 10 per cent. This is a 60 per cent reduction in the count below the boundary, not a 60 per cent rise in class achievement.

I used the same forty-student denominator in the chart for each test. I showed the mean and the below-thirty-five count separately because they use different units. Together, they helped me consider both the class's overall performance and the number of students still needing closer support.

11 Individual change and varied progress

Thirty-one students improved by at least one mark between the first and third assessments, representing 77.5 per cent of the class. Two students, AG and AH, were unchanged, representing 5 per cent. Seven students, B, L, M, O, Z, AI and AJ, declined, representing 17.5 per cent. These exact-change categories avoid treating a small gain as no gain without explanation.

For a supplementary description of approximate stability, I use a transparent range of minus two to plus two marks. Under this rule, 25 students gained more than two marks, 14 were within two marks of their starting score and one declined by more than two marks. This is an analyst-defined descriptive rule, not a validated measure of test error or educational significance. Both classifications are retained so that a small decline is not hidden within a favourable summary.

I followed Student Q's progress with particular interest. The scores were 35, 39 and 54, with gains of four and fifteen marks and an overall increase of nineteen. Q began at the thirty-five-mark reference point, not below it. The total marks show Q's improvement but do not identify exactly which skills accounted for it.

When I compared AC's scores of 64, 46 and 74, I noticed a much less steady pattern. The middle score fell by eighteen marks before rising by twenty-eight, giving a net gain of ten. I could not establish whether the fall resulted from question demands, preparation or performance on the day. AC's case reminded me to review more than one piece of work before deciding how secure a student's learning was.

I was concerned that B scored 29, 22 and 26, finishing three marks below the initial score and remaining below thirty-five throughout. K, Y and AI also stayed below thirty-five, although their score patterns differed. These students reminded me of the limits of the programme. I saw a positive class pattern, but I

had not resolved every student's learning needs. Further support would need to begin with a closer review of each learner's errors.

W and Q each gained nineteen marks, the largest increases in my register. At the end of the sequence, I gave notebooks to recognise achievement and improvement. AC had the highest final mark, 74. I did not retain a separate record identifying the improvement-award recipient, so I have not assigned that recognition to one of the two students tied for the largest gain. I also cannot separate the effect of recognition from the other influences on performance.

12 Evidence limitations and validity of interpretation

I used my complete student-wise register to calculate the comparison table, means, medians, ranges and fixed score bands. For maps, reasoning, answer writing and vocabulary, I relied partly on what I noticed while checking the scripts. I have kept these sources of evidence distinct: the marks show total-score change, while my observations help explain the learning needs I addressed.

I used papers with the same maximum marks and broad structure, but the questions, map locations and applications were different. Internal choices also allowed students to attempt different questions. I did not equate the forms for difficulty. I therefore cannot determine how much of the score change came from learning and how much may have been influenced by differences between the papers.

I cannot attribute all the improvement to my remedial teaching. Repeated practice, preparation for approaching examinations, my encouragement and students' other motivations may also have contributed. I considered these possibilities in my reflection, but I did not measure their effects separately or use a comparison group. I therefore do not know how the class would have progressed without the additional teaching.

I conducted the cycle over a short period and did not include a delayed assessment of retention. I could see how students performed soon after practice, but not whether they would retain the learning over a longer interval. I have therefore limited my conclusion to progress within this sequence. I have not used the later examination result in this report.

I did not carry out formal expert validation or calculate item-difficulty and reliability coefficients. I did not systematically retain separate parameter scores, count every error type or keep verbatim responses from every student. I also did not maintain a session-by-session log, record the exact number or duration of practice rounds, retain a complete set of worksheets and corrected responses, or keep a record of classroom technology use. These gaps limit the detail and verification of my account. Item-wise error codes, component scores and corrected samples would have helped me explain the progress more precisely. As both teacher and script reviewer, I recognise that my expectation of improvement may have influenced my qualitative judgement.

13 Reflection and future diagnostic cycle

My main professional lesson was to let the second assessment change my teaching. I noticed improvement in answer writing and reasoning after the first remedial phase, but not a clear improvement

in maps. I therefore gave maps more attention and made vocabulary and answer construction more explicit in the second phase.

The final results made me more careful about what I called success. I found a higher class mean and fewer students below the reference score, but seven students had lower final marks and four remained below thirty-five. I also continued to notice vocabulary problems. I needed to include those difficulties in my conclusion because they identified the support still required after my programme ended.

In another cycle, I would retain evidence at the point of assessment rather than attempt to reconstruct it later. The complete marks register now allows accurate total-score analysis, but a skill-level record would make the teaching decisions more precise. I would also use short practice checks between the larger assessments so that a continuing difficulty could be noticed earlier.

What I would do next	Purpose	What I would record
Item-wise error analysis	Distinguish omission, misconception and incomplete explanation	Code-linked item record
Skill-wise scoring	Follow map, reasoning and writing performance separately	Defined rubric and component scores
Individual error profiles	Match support to each learner's recurring difficulty	Brief profile updated after each check
Preserve corrected samples	Show the change between an original and revised response	Anonymised samples with feedback
Weekly map practice	Build repeated independent spatial recall	Dated map attempts and corrections
Vocabulary tracking	Check meaning and use, not definition alone	Terms used in sentences and answers
Answer-writing checklist	Support planning and self-review	Command, demand, points, explanation and vocabulary checks
Delayed follow-up assessment	Examine retention after immediate practice effects	A comparable later task and its scores

I would use these measures in a future cycle to make the link between diagnosis and teaching more precise. I would also want to know whether students could retain the learning and use it independently after the immediate period of practice.

14 Conclusion

Through this sequence, I identified difficulties in map work, conceptual reasoning and structured answers, with vocabulary remaining a concern. I provided two phases of focused practice and changed

my teaching after the second assessment. I found that the class mean rose by 4.90 marks and the number below thirty-five fell from ten to four. I also noticed better map work and answer organisation, although some students still needed support. As a trainee teacher, I learned to use assessment to guide instruction and to recognise progress without overlooking the difficulties that remained.

XYZ

DIAGNOSTIC TEST – SOCIAL SCIENCE

WEEK 1 – BASELINE DIAGNOSTIC TEST

Class: **IX-A**	Time Allowed: **3 Hours**	Maximum Marks: **80**	Test Form: **Week 1**
Student Code / Roll No.: _____	Date: _____	NCERT Base: **Social Science Part 1**	School: **XYZ**

GENERAL INSTRUCTIONS

1. There are 38 questions. All questions are compulsory, except where an internal choice is given.
2. The paper has four sections: A–History, B–Geography, C–Political Science and D–Economics. Each section carries 20 marks.
3. VSA questions carry 2 marks (answer in about 40 words), SA questions 3 marks (about 60 words), LA questions 5 marks (about 120 words), and case-based questions 4 marks.
4. Map skill questions carry 5 marks in total: History 2 marks and Geography 3 marks. Use the Map Sheet at the end of the paper.
5. All content in this paper is drawn from or directly adapted from the uploaded NCERT Grade 9 Social Science Part 1 textbook; answer in your own words.

SECTION A – HISTORY — 20 marks

1. The use of microlithic tools and temporary settlements near rivers and lakes is most closely associated with which period? **1**
A. Palaeolithic B. Mesolithic C. Neolithic D. Chalcolithic

2. Which development most clearly marks the Neolithic period in the textbook? **1**
A. Exclusive dependence on hunting B. Agriculture and domestication C. Iron smelting D. Oceanic trade

3. Arrange these stages from earliest to later: (i) Neolithic, (ii) Palaeolithic, (iii) Chalcolithic, (iv) Mesolithic. **1**
A. ii–iv–i–iii B. iv–ii–iii–i C. ii–i–iv–iii D. iii–i–iv–ii

4. Which pair of early texts is discussed in the chapter as evidence for political and social life in early India? **1**
A. Rigveda and Arthashastra B. Ain-i-Akbari and Akbarnama C. Arthashastra and Tuzuk-i-Baburi D. Rigveda and Constitution of India

5. [VSA] Why do historians divide early human history into archaeological ages such as the Stone Age and Bronze Age? State two points. **2**

6. [SA] Explain how assemblies such as the sabha and samiti could limit the power of the raja in early India. **3**

7. [LA] How did political organisation change from the Vedic period to large empires such as the Mauryas and Guptas? Explain the main features of administration. **5**
OR
Describe the most important features of state and society in India before 1000 CE.

8. [CBQ] TEXTBOOK-BASED SOURCE: A second-century CE Nashik inscription of Ushavadata records him giving a cave to the Sangha and placing a permanent money endowment with guilds of weavers. The interest from the deposits was to support members of the Sangha. **4**
8.1 What economic role of guilds is visible here? (1)
8.2 Why could guilds be trusted with money deposits? (1)
8.3 Identify the donor and the donees mentioned in the textbook source. (2)

9. [MAP] MAP SKILL – HISTORY: On the outline map of India provided on the Map Sheet, locate and label: (a) Pataliputra, (b) Mathura. **2**
For a visually impaired candidate: Name the present-day regions/states in which these two ancient centres are located.

SECTION B – GEOGRAPHY — 20 marks

10. Most earthquakes and volcanoes occur along plate boundaries, especially around which oceanic region identified in the textbook as the “Ring of Fire”? **1**
A. Atlantic Ocean B. Indian Ocean C. Pacific Ocean D. Arctic Ocean

11. Which of the following is an external agent of gradation? **1**
A. Folding B. Faulting C. Running water D. Volcanic eruption

12. Which layer contains most weather phenomena and supports life most directly? **1**
A. Troposphere B. Stratosphere C. Mesosphere D. Exosphere

13. Which gas forms the largest share of the atmosphere? **1**
A. Oxygen B. Nitrogen C. Carbon dioxide D. Argon

14. Aeroplanes commonly fly in the lower stratosphere mainly because it is comparatively: **1**
A. turbulent and cloudy B. stable and free from most weather disturbances C. rich in water vapour D. the hottest layer

15. Which set gives the four main seasons used by the India Meteorological Department in the textbook? **1**
A. Spring, Summer, Autumn, Winter B. Winter, Summer, Monsoon, Post-monsoon C. Dry, Wet, Cold, Hot
D. Winter, Spring, Monsoon, Autumn

16. [VSA] Why and where do earthquakes occur frequently? Give two textbook-based points. **2**

17. [LA] “Plate movements are responsible for the distribution of earthquakes and volcanoes.” Explain the statement. **5**
OR
Explain how internal and external forces together shape the Earth’s surface, using suitable examples from the chapter.

18. [CBQ] TEXTBOOK-BASED CASE: India’s climate is strongly influenced by seasonal winds. The south-west monsoon brings a large share of annual rainfall to many regions, while the retreating or north-east monsoon affects some regions differently. **4**
18.1 Name the season associated with the south-west monsoon. (1)
18.2 Which monsoon is associated with retreating winds? (1)
18.3 Explain any two ways in which the monsoon influences life, agriculture or livelihoods. (2)

19. [MAP] MAP SKILL – GEOGRAPHY: On the outline world map provided on the Map Sheet, locate and label any THREE: Pacific Plate, Eurasian Plate, Indo-Australian Plate. **3**
For a visually impaired candidate: Name the three major plates asked above.

SECTION C – POLITICAL SCIENCE — 20 marks

20. Which situation best reflects popular sovereignty? **1**
A. A law is passed without public discussion B. Citizens vote to choose representatives C. A court gives a judgment D. A minister acts without consultation

21. The Rule of Law is violated when: **1**
A. laws apply equally to all B. courts review government actions C. powerful individuals are treated above the law D. citizens use legal means to challenge laws

22. Members of the Lok Sabha and State Legislative Assemblies are chosen mainly through: **1**
A. indirect elections B. direct elections C. nomination only D. hereditary succession

23. Which is NOT presented in the textbook as an importance of elections in a democracy? **1**
A. Accountability B. Representation C. Legitimacy D. Hereditary authority

24. **[VSA]** State any two ways in which the Constitution strengthens democracy in India. **2**

25. **[VSA]** Differentiate between direct and indirect elections with one example of each from the textbook. **2**

26. **[SA]** Is voting alone enough to make a country democratic? Give three reasons based on the chapter. **3**

27. **[LA]** Explain the major functions of the Election Commission of India in conducting free, fair and transparent elections. **5**
OR
Explain the role of political parties in helping a democracy function effectively.

28. **[CBQ]** TEXTBOOK-BASED CASE: A school cabinet had to plan a Republic Day celebration. Members disagreed about the activities. They discussed the options, voted, and accepted the activities supported by the majority. **4**
28.1 Name one democratic value reflected in the process. (1)
28.2 How did voting help resolve the disagreement? (1)
28.3 State two responsibilities of elected representatives after a decision is made. (2)

SECTION D – ECONOMICS — 20 marks

29. A student has ₹100 and must choose between buying a notebook now or saving for a tennis racket later. Which concept best explains this choice? **1**
A. Demand B. Opportunity cost C. Production D. Inflation

30. The basic economic problem arises because human wants are unlimited while resources are: **1**
A. unlimited B. scarce C. equally distributed D. free

31. Which is one of the three central economic questions in the textbook? **1**
A. When to vote? B. For whom to produce? C. Where to migrate? D. Which season to grow?

32. According to the law of demand, other things remaining constant, when price falls, quantity demanded generally: **1**
A. falls B. rises C. remains fixed D. becomes zero

33. According to the law of supply, other things remaining constant, a rise in price generally leads quantity supplied to: **1**
A. rise B. fall C. disappear D. remain unchanged

34. Market equilibrium occurs when: **1**
A. demand is zero B. supply is zero C. quantity demanded equals quantity supplied D. government fixes every price

35. [VSA] Why cannot all human wants be satisfied? Explain using scarcity and choice. **2**

36. [SA] State and explain any three factors, other than the good's own price, that can influence demand. **3**

37. [LA] A farmer replaces labour-intensive manual irrigation with drip irrigation that uses less water and raises yield. Explain how this technological change can affect (i) cost of production, (ii) willingness to supply at different prices, and (iii) market supply if many farmers adopt it. **5**
OR
Compare market, planned and mixed economic systems in terms of how they answer the central economic questions.

38. [CBQ] TEXTBOOK-BASED DATA: A consumer buys 1 kg of mangoes at ₹150/kg, 2 kg at ₹100/kg and 3 kg at ₹50/kg. **4**
38.1 What relationship between price and quantity demanded is shown? (1)
38.2 Name the graphical representation of this demand schedule. (1)
38.3 Explain why the curve slopes downward, keeping other factors constant. (2)

MAP SHEET – QUESTIONS 9 & 19

XYZ | Class IX-A | WEEK 1 – BASELINE DIAGNOSTIC TEST | Student Code: _____

Q9 (History – 2 marks): On the outline map of India, locate and label: (a) Pataliputra, (b) Mathura.

Q19 (Geography – 3 marks): On the outline world map, locate and label any THREE: Pacific Plate, Eurasian Plate, Indo-Australian Plate.

Do not write your name on this sheet. Use only the Student Code / Roll No.

XYZ

DIAGNOSTIC TEST – SOCIAL SCIENCE

WEEK 2 – PROGRESS DIAGNOSTIC TEST

Class: **IX-A**	Time Allowed: **3 Hours**	Maximum Marks: **80**	Test Form: **Week 2**
Student Code / Roll No.: _____	Date: _____	NCERT Base: **Social Science Part 1**	School: **XYZ**

GENERAL INSTRUCTIONS

1. There are 38 questions. All questions are compulsory, except where an internal choice is given.
2. The paper has four sections: A–History, B–Geography, C–Political Science and D–Economics. Each section carries 20 marks.
3. VSA questions carry 2 marks (answer in about 40 words), SA questions 3 marks (about 60 words), LA questions 5 marks (about 120 words), and case-based questions 4 marks.
4. Map skill questions carry 5 marks in total: History 2 marks and Geography 3 marks. Use the Map Sheet at the end of the paper.
5. All content in this paper is drawn from or directly adapted from the uploaded NCERT Grade 9 Social Science Part 1 textbook; answer in your own words.

SECTION A – HISTORY — 20 marks

1. Early human evolution began in which continent according to the textbook? **1**
A. Europe B. Africa C. Australia D. South America

2. The Chalcolithic period is associated with the use of: **1**
A. only iron tools B. copper together with stone tools C. only bronze weapons D. only wooden tools

3. Which feature is common to the major Bronze Age civilisations discussed in the chapter? **1**
A. Absence of trade B. Urban centres and administration C. Complete lack of writing D. Nomadic life only

4. Which early Indian political form refers to republic-like organisations mentioned in the textbook? **1**
A. Ganas or Sanghas B. Presidencies C. Provinces of British India D. Municipal corporations

5. [VSA] Explain two ways in which river-valley environments offered both opportunities and challenges to early civilisations. **2**

6. [SA] Differentiate between varna and jati in early Indian society. Mention one factor that contributed to the formation of different jatis. **3**

7. [LA] Describe the role of the king, important officers and the methods used to govern large territories in early India. **5**
OR
Explain how early Indian trade routes helped in the exchange of goods, skills, beliefs and cultural practices.

8. [CBQ] TEXTBOOK-BASED CASE: The Neolithic period brought a major shift from hunting and gathering towards agriculture, domestication of animals and settled villages. Pottery and weaving also became important. **4**
8.1 Name the change in subsistence described above. (1)
8.2 State one feature of permanent village life. (1)
8.3 Explain two challenges that a Neolithic farmer could face that a hunter-gatherer might not face in the same way. (2)

9. [MAP] MAP SKILL – HISTORY: On the outline map of India provided on the Map Sheet, locate and label: (a) Ujjayini, (b) Nashik. **2**
For a visually impaired candidate: Name the present-day states in which these two centres are located.

SECTION B – GEOGRAPHY — 20 marks

10. The breaking down of rocks in place is called: **1**
A. deposition B. weathering C. folding D. volcanism

11. Which river landform forms when a river bends strongly across a floodplain? **1**
A. Meander B. Moraine C. Sand dune D. Sea arch

12. Which agent of gradation is primarily responsible for features such as moraines? **1**
A. Glaciers B. Wind C. Underground water D. Waves

13. Which atmospheric layer lies immediately above the troposphere? **1**
A. Mesosphere B. Stratosphere C. Thermosphere D. Exosphere

14. Which monsoon is especially important for rainfall in parts of the south-eastern coast during the retreating-monsoon period? **1**
A. South-west monsoon B. North-east monsoon C. Polar winds D. Local mountain winds

15. Which action listed in the chapter can help reduce an individual's carbon footprint? **1**
A. Burning more fossil fuels B. Saving energy and planting trees C. Increasing deforestation D. Wasting electricity

16. [VSA] How does deforestation affect soil formation and erosion? State two effects. **2**

17. [LA] Describe the four main seasons of India and explain the role of the south-west and north-east monsoons. **5**
OR
Differentiate between the troposphere and stratosphere, and explain why the structure of the atmosphere matters for weather and human activity.

18. [CBQ] TEXTBOOK-BASED CASE: External forces continuously reshape the Earth. Running water, waves, glaciers, wind and underground water erode, transport and deposit material, producing different landforms. **4**
18.1 Name one agent that forms river landforms. (1)
18.2 Name one agent that shapes coastal landforms. (1)
18.3 Explain the difference between erosion and deposition using examples from any two agents. (2)

19. [MAP] MAP SKILL – GEOGRAPHY: On the outline world map provided on the Map Sheet, locate and label any THREE: African Plate, South American Plate, Antarctic Plate. **3**
For a visually impaired candidate: Name the three major plates asked above.

SECTION C – POLITICAL SCIENCE — 20 marks

20. A democracy is not limited to elections because it also depends on institutions, rules and practices that enable: **1**
A. hereditary rule B. citizen participation in decision-making C. rule without accountability D. permanent one-person authority

21. Which principle requires public authorities to explain and take responsibility for their decisions? **1**
A. Accountability B. Heredity C. Secrecy D. Monopoly

22. The First-Past-The-Post (FPTP) system is discussed in the chapter mainly as a method of: **1**
A. converting votes into seats B. collecting taxes C. appointing judges D. measuring rainfall

23. The list containing the names of eligible voters in a constituency is called the: **1**
A. manifesto B. electoral roll C. money bill D. census schedule

24. **[VSA]** State any two democratic principles from the chapter that should guide decision-making. **2**

25. **[VSA]** What is meant by delimitation, and why is it required in an electoral system? **2**

26. **[SA]** Explain three ways in which citizens can participate in democracy beyond casting a vote. **3**

27. **[LA]** Explain at least three differences between national and state/regional political parties. Also state why political parties are important in a multi-party democracy. **5**
OR
Explain how the Election Commission and electoral rules help make elections free, fair and transparent.

28. **[CBQ]** TEXTBOOK-BASED CASE: A first-time voter registered through the Election Commission's online system. At the polling station, her disabled family member received wheelchair assistance, identity was verified using an accepted document, and the voter could view the VVPAT slip after voting. **4**
28.1 Identify one measure that made voting more inclusive. (1)
28.2 What does VVPAT help a voter verify? (1)
28.3 Explain two ways such arrangements support free, fair or inclusive elections. (2)

SECTION D – ECONOMICS — 20 marks

29. Opportunity cost is best described as: **1**
A. the money printed by government B. the next best alternative given up when a choice is made C. total production only D. the selling price of every good

30. In a market economy, the central economic questions are answered mainly through: **1**
A. private decisions and demand-supply interactions B. only government orders C. hereditary rules D. weather conditions alone

31. A mixed economy combines features of: **1**
A. only barter and trade B. market and planned systems C. agriculture and industry only D. imports and exports only

32. Which pair is a textbook example of complementary goods? **1**
A. Air conditioner and cooler B. Apple and banana C. Notebook and pen D. Two brands of the same fruit

33. An improvement in production technology, other things unchanged, is likely to make producers willing to supply: **1**
A. less at every price B. more at different prices C. nothing at all D. only imported goods

34. If a government fixes a maximum price for an essential good below the market equilibrium price, the textbook explains that a likely result is a: **1**
A. shortage B. surplus C. complete end of demand D. permanent equilibrium

35. **[VSA]** How does understanding opportunity cost improve economic decision-making? Give two points. **2**

36. **[SA]** Why do pure market or pure planned systems rarely exist in reality? Give three reasons for the practical use of mixed systems. **3**

37. **[LA]** During online festival sales, many products are sold at very low prices. Use demand, supply and equilibrium to explain why sellers may lower prices and how both consumers and sellers may be affected. **5**
OR
Explain the three central economic questions—what to produce, how to produce and for whom to produce—with suitable examples from the chapter.

38. **[CBQ]** TEXTBOOK-BASED CASE: The government sets a maximum selling price for an essential vaccine below the market-driven equilibrium price. **4**
38.1 What type of government intervention is this? (1)
38.2 Is shortage or surplus more likely at the controlled price? (1)
38.3 Explain why this outcome can occur using demand and supply. (2)

MAP SHEET – QUESTIONS 9 & 19

XYZ | Class IX-A | WEEK 2 – PROGRESS DIAGNOSTIC TEST | Student Code: _____

Q9 (History – 2 marks): On the outline map of India, locate and label: (a) Ujjayini, (b) Nashik.

Q19 (Geography – 3 marks): On the outline world map, locate and label any THREE: African Plate, South American Plate, Antarctic Plate.

Do not write your name on this sheet. Use only the Student Code / Roll No.

XYZ

DIAGNOSTIC TEST – SOCIAL SCIENCE

WEEK 3 – POST-REMEDIAL DIAGNOSTIC TEST

Class: IX-A	**Time Allowed:** 3 Hours	**Maximum Marks:** 80	**Test Form:** Week 3
Student Code / Roll No.: _____	**Date:** _____	**NCERT Base:** Social Science Part 1	**School:** XYZ

GENERAL INSTRUCTIONS

1. There are 38 questions. All questions are compulsory, except where an internal choice is given.
2. The paper has four sections: A–History, B–Geography, C–Political Science and D–Economics. Each section carries 20 marks.
3. VSA questions carry 2 marks (answer in about 40 words), SA questions 3 marks (about 60 words), LA questions 5 marks (about 120 words), and case-based questions 4 marks.
4. Map skill questions carry 5 marks in total: History 2 marks and Geography 3 marks. Use the Map Sheet at the end of the paper.
5. All content in this paper is drawn from or directly adapted from the uploaded NCERT Grade 9 Social Science Part 1 textbook; answer in your own words.

SECTION A – HISTORY — 20 marks

1. Before the invention of writing, early human history is studied mainly through: **1**
A. modern newspapers B. archaeological evidence such as tools, fossils and cave art C. television reports D. printed government files

2. Which statement about the Harappan script matches the textbook discussion? **1**
A. It has been fully deciphered B. It remains undeciphered C. It was written only in Latin D. It was invented in modern times

3. The Code of Hammurabi is associated with which early civilisation discussed in the chapter? **1**
A. Mesopotamian B. Harappan C. Chinese D. Egyptian

4. Which sequence best represents a broad political change in early India? **1**
A. Empires → janas → villages B. Janas led by a raja → larger kingdoms/republics → empires C. Modern states → janas → empires D. Guilds → monsoon → empires

5. [VSA] What are two limitations of relying only on texts written by scholars and advisers of kings to understand early governance? **2**

6. [SA] Why did education in early India emphasise both knowledge and moral values? Explain three possible benefits to society based on the chapter. **3**

7. [LA] What might have been the advantages and challenges of ruling a large empire without modern communication systems? Explain. **5**
OR
Explain the role of agriculture, irrigation, trade networks, ports and guilds in the economy of early Indian states.

8. [CBQ] TEXTBOOK-BASED CASE: Early Indian trade routes connected important centres and allowed merchants, craftspeople, travellers and religious communities to move across regions. Trade and guilds supported commerce while ideas and cultural practices travelled with people. **4**
8.1 Name one economic activity supported by these routes. (1)
8.2 Name one non-material element that could spread through these routes. (1)
8.3 Explain two ways trade routes could promote both economic and cultural exchange. (2)

9. [MAP] MAP SKILL – HISTORY: On the outline map of India provided on the Map Sheet, locate and label: (a) Rajgriha, (b) Kanchipuram. **2**
For a visually impaired candidate: Name the present-day states in which these two centres are located.

SECTION B – GEOGRAPHY — 20 marks

10. The energy driving many internal processes of the Earth ultimately comes mainly from: **1**
A. internal heat of the Earth B. moonlight only C. ocean tides only D. rainfall only

11. Which statement about earthquake prediction best matches the chapter? **1**
A. Exact prediction is always possible B. Exact prediction remains difficult, though hazard-prone zones can be identified C. Earthquakes occur only at the equator D. Earthquakes never occur near plate boundaries

12. Which agent can create landforms such as caves and sinkholes in suitable rocks? **1**
A. Underground water B. Glaciers only C. Wind only D. Lava only

13. Climate refers primarily to: **1**
A. moment-to-moment atmospheric conditions B. long-term patterns of weather C. one day's rainfall only D. one hour's wind speed

14. The textbook links present climate change mainly with human activities such as: **1**
A. burning fuels and cutting trees B. plate movement only C. tides only D. phases of the Moon

15. Which measure can reduce carbon footprint? **1**
A. Greater energy wastage B. Renewable energy use C. More tree cutting D. More fossil-fuel burning

16. **[VSA]** Why is it useful to identify earthquake- and volcano-prone regions even when exact earthquake prediction is difficult? **2**

17. **[LA]** Prepare a five-point disaster-mitigation plan for any one landform-related hazard discussed in the chapter—landslide, avalanche, GLOF or sandstorm—using causes and safety measures from the textbook. **5**
OR
Explain the causes and effects of climate change and suggest textbook-based ways to reduce carbon footprint.

18. **[CBQ]** TEXTBOOK-BASED CASE: Climate change is a long-term shift in weather patterns. The chapter links human activities such as fuel burning and tree cutting with global warming and more extreme weather, while also suggesting energy saving, renewable energy and tree planting. **4**
18.1 Name one human activity that contributes to climate change. (1)
18.2 Name one action that can reduce carbon footprint. (1)
18.3 Explain two ways climate change can influence natural hazards or human life. (2)

19. **[MAP]** MAP SKILL – GEOGRAPHY: On the outline world map provided on the Map Sheet, locate and label any THREE: North American Plate, Pacific Plate, African Plate. **3**
For a visually impaired candidate: Name the three major plates asked above.

SECTION C – POLITICAL SCIENCE — 20 marks

20. Which activity reflects civic responsibility in the textbook? **1**
A. Spreading unverified information B. Respecting others' rights and using social media responsibly C. Ignoring laws D. Damaging public property

21. Which feature of Indian democracy means every adult citizen can vote subject to the law? **1**
A. Universal adult franchise B. Hereditary franchise C. Property franchise only D. Nomination only

22. Which constitutional principle requires everyone, including those in authority, to be subject to law? **1**
A. Rule of Law B. Hereditary privilege C. Monopoly D. Censorship

23. Misinformation, fake news and intimidation are discussed in the elections chapter as: **1**
A. methods of weather forecasting B. challenges to free and fair elections C. types of economic systems D. ancient trade practices

24. [VSA] State two ways in which responsible use of media can strengthen democracy. **2**

25. [VSA] State two reasons why periodic elections are essential for accountability in a democracy. **2**

26. [SA] Explain three ways in which democratic institutions, rules and citizen participation work together to make democracy more than just elections. **3**

27. [LA] Choose any one democratic institution discussed in the textbook—Parliament, Election Commission, Judiciary or Panchayat—and explain its role in democracy and how it promotes accountability and participation. **5**
OR
Explain the main challenges to free and fair elections mentioned in the chapter and the measures used to address them.

28. [CBQ] TEXTBOOK-BASED CASE: The elections chapter identifies misinformation, fake news and intimidation as challenges. It also discusses legal rules, the Model Code of Conduct, EVM/VVPAT arrangements, voter-awareness measures and the role of the Election Commission. **4**
28.1 Identify one challenge to free and fair elections. (1)
28.2 Name one institutional or procedural measure mentioned in the chapter. (1)
28.3 Explain how two such measures can improve fairness or voter confidence. (2)

SECTION D – ECONOMICS — 20 marks

29. When a person chooses one use of scarce resources and gives up another, the foregone alternative is the: **1**
A. equilibrium price B. opportunity cost C. public good D. weather cost

30. Which economic system relies most heavily on government control over major production decisions? **1**
A. Planned economy B. Market economy C. Barter only D. Household economy

31. A good whose demand can rise when the price of another good rises because consumers switch between them is a: **1**
A. complementary good B. substitute good C. public good only D. free good

32. Which change is most likely to increase market supply, other things constant? **1**
A. Better production technology B. Higher input costs C. Fewer sellers D. Crop failure

33. At a price above equilibrium, the quantity supplied is generally greater than quantity demanded. This creates a: **1**
A. shortage B. surplus C. monopoly automatically D. zero market

34. Government may intervene in markets when essential goods become unaffordable, public goods are under-provided, or: **1**
A. no consumer exists B. monopolies create unfair outcomes C. rainfall is average D. every price is already zero

35. **[VSA]** Why is reliable data important for effective economic decisions? Give two textbook-based reasons. **2**

36. **[SA]** Differentiate between substitute and complementary goods and give one textbook example of each. **3**

37. **[LA]** Using demand and supply, explain what happens at (i) a price above equilibrium, (ii) the equilibrium price, and (iii) a price below equilibrium. Include the ideas of surplus and shortage. **5**
OR
Analyse how present economic choices can shape a country's long-term future and why future consequences should be considered today.

38. **[CBQ]** TEXTBOOK-BASED CASE: A farmer adopts drip irrigation that reduces water use and increases yield. If many farmers adopt the technology, costs and the quantities offered for sale can change. **4**
38.1 Which determinant of supply is changing? (1)
38.2 Is market supply likely to increase or decrease? (1)
38.3 Explain how the change can affect the supply curve and market equilibrium, other things remaining constant. (2)

MAP SHEET – QUESTIONS 9 & 19

XYZ | Class IX-A | WEEK 3 – POST-REMEDIAL DIAGNOSTIC TEST | Student Code: _____

Q9 (History – 2 marks): On the outline map of India, locate and label: (a) Rajgriha, (b) Kanchipuram.

Q19 (Geography – 3 marks): On the outline world map, locate and label any THREE: North American Plate, Pacific Plate, African Plate.

Do not write your name on this sheet. Use only the Student Code / Roll No.
